Using Your *Advantage* Boat Rack

We make custom boat racks that secure your *Advantage* to a car rack and are extremely easy and efficient to use. The rack is designed to be tied down to your car rack crossbars for transportation and also to act as a support for storage. The boat is fastened to the rack by resting the tracks on the racks plastic track inserts, pulling the bungee cord through the rope handle and hooking over the bolt. The last step is to bolt the wing rigger thumb screws through the slots in the boat rack. There are also bungees to secure your skulls alongside the rack. The following diagram should be helpful:

ASSEMBLED VAN DUSEN BOAT RACK

When travelling the wing bungees go up + over the wing + attach to the bolt indicated by pink

Side Bungee Hook Slip Screws

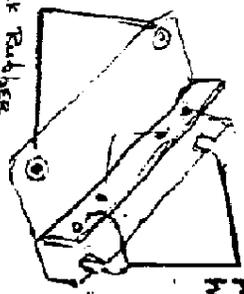

AFT BUNGEE HOOK OVER TOP AFT CROSSBAR

Bungee's for wings

* NOTE: "Pads" are defined by the shaded areas.

Replaces what is circled in yellow

When travelling with wing on boat, bolts on wing rest on black rubber grommets

When travelling without wing on boat wing frame screws rest here.
